

Git Take-Home Assignment

Included in this package is a folder called `my_first_git_repo`. It contains several files and folders.

Your task is to:

1. Initialize a git repository in the `my_first_git_repo` folder.
2. Add all of the files in `my_first_git_repo` into your version control, except for the file `DO_NOT_ADD.txt`.
3. Create a Github account (if you do not have one already).
4. Create an empty repository on Github.
5. Populate your new Github repository by pushing the content from your local repository.

Deliverable

The deliverable for this assignment is a screenshot (you may zip multiple screenshots if necessary). Your screenshot(s) should include the terminal commands you used for steps 1, 2, and 5 with the corresponding terminal output.

If you used TortoiseGit (or another GUI based Git application), your screenshot(s) should demonstrate that the above task was successfully completed.
